

# locks and chains

Squire lock and chain sets have been designed to combine chains with padlocks of a similar security level.

There are sets to cover all possible requirements. Extremely high security Sold Secure Gold locks and chains such as the SS65CS/TC4, SS50CS/G3 and the **Eiger mini™**/G3 Brake Disc Lock are designed for securing motorcycles and very high value bicycles.

The DCL1/J3 achieves Sold Secure Silver and there are also economical, mid level security lock and chain sets such as the CP50/36 and the 3536.

The stronghold padlocks feature strongly in the lock and chain sets, these are one of Squires best selling high security padlocks, their Sold Secure rating offers added reassurance of their ability to resist attack.

For those who prefer combination products the G3 chain combined with Squires new SS50 combination padlock gives all the convenience of combination with no reduction in the level of security. The CP50 padlock combined with a 6mm hardened steel chain gives mid level protection at an economical price.
